

As a paid subscriber to XM radio, I would like to urge the FCC to reject petition 04-160 by the NAB. Access to traffic and weather through XM is a main selling point for me. In remote areas, it is often difficult to find traffic and weather information on FM or AM. XM allows another alternative for this type of information. I value these services on XM, and expect this type of service to be available in the future.

Sincerely,

William Snyder
